

Instructions

The project is designed to be self led and is delivered through a guided workbook in the form of a powerpoint presentation.

The project will require internet access and the use of basic audio and video recording (for example on a phone)

Students should use the presentation provided to add their work and can insert text directly into the presentation.

The link below will allow each student to make their own copy of the master document - so they don't have to worry about writing over someone else's work.
